EDUCATION

University of Central Florida, Computer Science, M.S. **2026 — Present**

- GPA: 4.00

University of Central Florida, Computer Science, B.S. **2021 — 2025**

- GPA: 3.64

EXPERIENCE

Software Engineer Intern, YouROK **February 2026 — May 2026**

- Migrated a legacy **PHP** backend to a modular **Node.js/TypeScript** service, redesigning the database schema and implementing a new **GraphQL API**.
- Deployed containerized services on **DigitalOcean** using **Docker** and automated **CI/CD** pipelines.
- Eliminated **N+1 query bottlenecks** with **DataLoader** batching and caching, reducing feed requests to a fixed number of database queries regardless of post count.

PROJECTS

European Football Stats **October 2025 — Present**

- Created a full-stack analytics platform for the top **5** European football leagues, supporting match previews, historical analysis, post-match stats, and lineups.
- Designed a relational data model supporting **200+** teams, **3,000+** players, **35,000+** matches, and **20+** years of historical league data.
- Automated a daily ETL pipeline with **GitHub Actions** that pulls match, odds, and goal-timeline data from **3** external APIs into Postgres, independent of web server uptime.
- Deployed the API on **AWS EC2** in a custom **VPC**, routing traffic through **API Gateway**, a **VPC Link**, and **Cloud Map**, with no publicly exposed inbound ports; hosted the frontend on **Vercel**.

France Travel Guide **April — November 2025**

- Designed and built a **bilingual** (French/English) travel site with **Next.js**, **Express/TypeScript**, and **PostgreSQL** with **Drizzle ORM** containing **37,000+** rows of public INSEE data.
- Reduced latency by **80%** and cut API costs for cached cities by implementing an AI description cache.
- Deployed a hybrid **AWS** architecture combining serverless APIs (**API Gateway**), relational storage (**RDS**), and **EC2**-based services, with **Amplify** and **Cognito** for frontend hosting and authentication.

Babble **January — July 2025**

- Developed a proof-of-concept translation platform with a **React** frontend and **FastAPI** backend.
- Benchmarked open-source translation models using **HuggingFace** with COMET and BLEU metrics.
- **Fine-tuned** selected models, improving BLEU scores by up to **35%**.
- Created document parsing and layout-preservation pipelines for DOCX and PDF files.

Pegasus Parking **October — December 2024**

- Built a **MERN** application with an **Express.js/Mongoose** backend for 14 campus parking lots, integrating Google's Routes API to recommend the nearest available parking location.

SKILLS

- **Programming Languages:** Java, Python, JavaScript, TypeScript, C, SQL
- **Frameworks & API:** React, Next.js, Node.js, Express.js, FastAPI, GraphQL, Redux
- **Databases:** PostgreSQL, MySQL, MongoDB, Supabase, Drizzle ORM
- **Cloud:** AWS (EC2, VPC, API Gateway, Cloud Map, RDS, Amplify, Cognito), DigitalOcean
- **DevOps & Tools:** Docker, GitHub Actions, Linux, Git, Postman, Jira
